LOCKDOWN  
STRIKES

# "SUPERHEROES"

The first case of COVID-19 in India, which originated from China, was reported on 30 January 2020.

India currently has the largest number of confirmed cases in Asia.

Has the third highest number of confirmed cases in the world after the United States and Brazil.

Number of total confirmed cases breaching the 100,000 mark on 19 May and 200,000 on 3 June.

# PROBLEM STATEMENT

**Description :** The sentiment analysis of Indians after the extension of lockdown announcements to be analyzed with the relevant #tags on twitter and build a predictive analytics model to understand the behavior of people if the lockdown is further extended.

Also develop a dashboard with visualization of people's reaction to the government announcements on lockdown extension.

**Expected Solution :** Develop a twitter sentiment analysis model to understand the following

1. Get to know people's sentiment towards the epidemic
2. Understand the sentiments of people in the government. decision to extend the lockdown.

# TIMELINE

# Technologies and Framework Used

# **Solution Approach**

# 1

# Data Collection

Used kaggle to extract the Dataset containing tweets for March 29, 2020. It contains 22 columns 564141 rows.

```
'user_id', 'created_at', 'screen_name', 'text',  
'source', 'reply_to_status_id', 'reply_to_user_id',  
'reply_to_screen_name', 'is_quote', 'is_retweet',  
'favourites_count', 'retweet_count', 'country_code',  
'place_full_name', 'place_type', 'followers_count',  
    'friends_count', 'account_lang',  
    'account_created_at', 'verified', 'lang'
```

# 2

## Data Pre-processing

The tweets specific to India are extracted from the dataset after removing all the unwanted attributes.

The resultant dataset contains 4 columns and 1574 rows.

	created_at	text	favourites_count	retweet_count
0	2020-03-29T00:04:06Z	"#Covid19: #SocialDistancing the Indian way" ...	10374	0
1	2020-03-29T00:04:55Z	Possible case of human to animal transmission ...	22880	0
2	2020-03-29T00:07:20Z	#Coronavirus: #US eclipses 120,000 confirmed c...	12968	6
3	2020-03-29T00:09:14Z	The bitter truth 🙄\n#covid_19 #covid19india #l...	6	0
4	2020-03-29T00:13:20Z	#CoronavirusOutbreak All Churches shd realize...	38	0

# 3

## Data Analysis

For Data Analysis all the stopwords, symbols, numbers and special characters are removed from the text attribute.

Now, the output of pre-processed tweets in the text attribute becomes more meaningful and readable when compared to the collected tweets.

```
0          covid19 socialdistancing the indian way
1 possible case of human to animal transmission ...
2 coronavirus us eclipses 120 000 confirmed case...
3 the bitter truth covid 19 covid19india lockdown...
4 coronavirusoutbreak all churches shd realize t...
Name: text, dtype: object
```

## 4

# Sentiment Analysis

Sentiment analysis is being done using one of the NLP library 'TextBlob' under IBM Watson Notebook. We created a new dataset which stores sentiments (positive, negative or neutral) and polarity corresponding to all tweets.

	created_at	text	favourites_count	retweet_count	sentiment	polarity
0	0.066667	covid19 socialdistancing the indian way	10374	0	neutral	0
1	0.066667	possible case of human to animal transmission ...	22880	0	negative	-0.23125
2	0.116667	coronavirus us eclipses 120 000 confirmed case...	12968	6	positive	0.4
3	0.150000	the bitter truth covid 19 covid19india lockdown...	6	0	negative	-0.1
4	0.216667	coronavirusoutbreak all churches shd realize t...	38	0	positive	0.1375

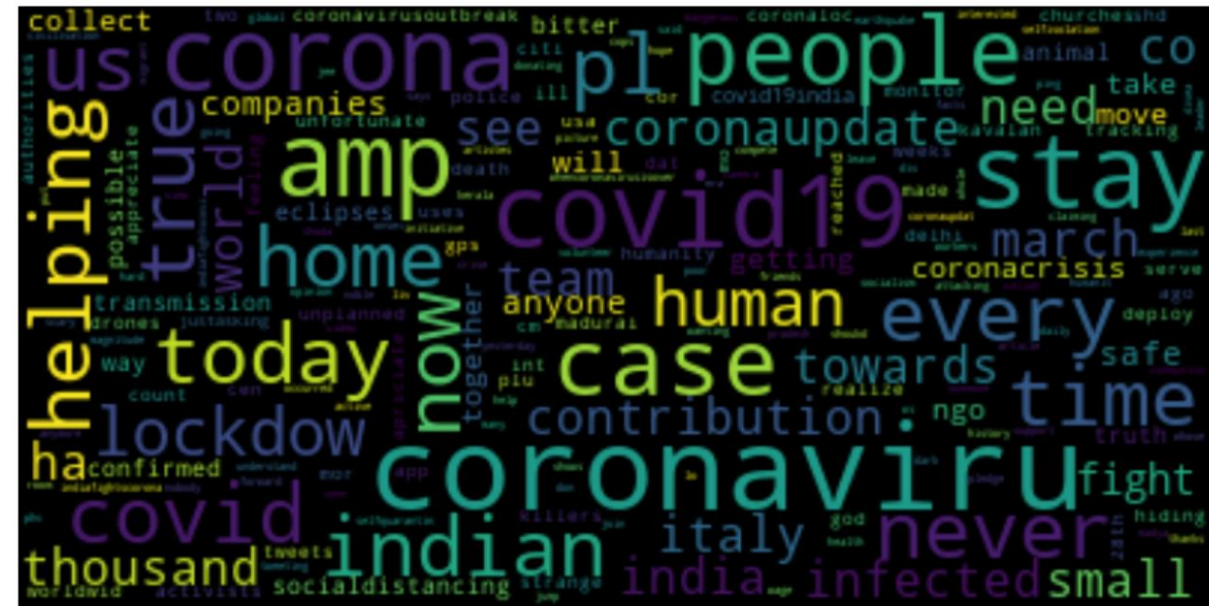

positive	715
neutral	540
negative	319

Name: sentiment, dtype: int64

# Visualization

Many visualization plots from libraries like matplotlib and seaborn are used to visualize the results.

## Results of Sentiment Analysis

- During the initial phase, the score of positive reactions is more than that of the other sentiments.
- Observations from the recent analysis show decrease in the positive sentiment score.
